EDUCATION

University of South Carolina (2022-2026)

Bachelor of Science, Computer Science

Columbia, SC

GPA: 3.5

WORK EXPRENCCE

Schneider Electric

Computer Science Intern

Hopkins, SC

Jan 2025- Aug 2025

- Built an engineering **pod-performance reporting system** using **VB.NET, WPF, MVVM, SQL Server, and LiveCharts**, helping supervisors compare electrical and mechanical team strengths, weaknesses, and order-type performance to better assign work and identify production bottlenecks.
- Developed an automated **5X drawing detection process** using **SOAP APIs, SQL Server, and business logic scripts** to inspect order BOM data, identify missing drawings required for SWBD and LVDO manufacturing, and email responsible engineers with missing order details.
- Maintained and improved internal WPF business applications using **Visual Studio, Visual Studio Code, Git, GitHub, SQL Server stored procedures, caching, and MVVM**, improving dashboard UI, chart data reliability, application speed, and long-term maintainability.

PROJECT

[Terrain Trail — USC Campus Route Planning Web App](#)

- Contributed to a full-stack campus route planning app by focusing on **Settings, backend REST APIs, account management, and parts of Login/Signup**, enabling users to securely create accounts, update profiles, change passwords, and manage account data.
- Developed and improved authentication and account APIs with **Node.js, Express, MongoDB Atlas, Mongoose, JWT, bcrypt, CORS, and NodeCache**, improving security, reducing repeated database calls, and making account-related pages faster and more reliable.
- Migrated route and map-related data from client-side storage toward server-backed persistence near release, helping the app better support saved routes, public route sharing, and multi-user data access beyond a single browser session.

[Residential Electricity Prices and Data Center Presence Dashboard](#)

- Created an interactive dashboard using **Python, Dash, Plotly, and pandas** to compare state-level residential electricity price changes with data center presence, helping users explore possible energy-cost trends across the United States.
- Cleaned and merged electricity price, generator, and data center count datasets using **Python and CSV data processing**, improving data quality for maps, charts, and state-level analysis.
- Built choropleth maps, bubble overlays, hover tooltips, year controls, and percent-change views using **Plotly and Dash**, making complex energy and infrastructure data easier to understand for non-technical audiences.

TECHNICAL SKILLS

Languages: VB.NET, Python, JavaScript, C++, C, Kotlin, SQL, HTML/CSS, Java,

Frameworks/Libraries/Tools: WPF, .NET, React, Node.js, Express.js, Mongoose, Dash, Plotly, pandas, LiveCharts, Git, Linux

Databases/Cloud: SQL Server, MongoDB Atlas, Firebase Firestore, MySQL, Render, Vercel
